Lab access & safety

Northstar Research Lab | Fictional demonstration policy | Version 1.2.

The research lab opens Monday through Friday from 9:00 AM to 7:00 PM. Weekend access requires written approval from the lab manager.

Before entering the lab, students must complete the safety orientation and register their institute ID card. Visitors must be accompanied by a registered lab member.

Food and open drinks are not permitted near workstations. Report equipment faults to the lab manager; do not attempt electrical repairs. The emergency assembly point is the east courtyard.

Compute resources

Each student receives a monthly compute budget of 20 GPU hours. Unused GPU hours do not roll over to the next month.

GPU sessions have a maximum duration of 4 hours. Jobs still running at the end of a session are terminated automatically, so save checkpoints to persistent storage.

Reserve a GPU workstation through the lab booking portal at least 24 hours before use. Cancel a reservation at least 2 hours in advance to avoid a booking warning.

Cryptocurrency mining and hosting public services on lab machines are prohibited. Software that needs administrator access must be installed by lab staff.

Research data

Student research datasets must be stored in the institute-managed project drive. Personal information must be removed or anonymized before it is uploaded.

Confidential research data must not be sent to external AI APIs without written authorization from the data owner. Use synthetic data for public demonstrations.

Project data is retained for 90 days after project completion and then deleted. A retention extension requires approval from the research supervisor before the deletion date.

Report a suspected data exposure to the lab manager within 24 hours. Public datasets must retain their original license and attribution information.
